

Design Input from the February 17, 2015 HAC Meeting

1. **Option B** elevation design was overwhelmingly the most desirable design.
2. Eliminate the bump out on south side of Option B - work in public entrance into south face to allow for common access to the boater's lounge.
3. Increase glass element on southeast side of structure wrapping around office space (similar to Option A) to increase employee line of sight to piers, fish cleaning station and launch.
4. Make restrooms, boaters lounge and the laundry room available to the slip holders after hours
