CURED-IN-PLACE SEWER PIPE LINING

Beginning the week of Wednesday, July 10, 2013, various areas in the City of Marquette will experience traffic disruptions due to cured-in-place sanitary sewer pipe lining operations. Insituform Technologies will be incorporating trenchless technology by the use of a cured-in-place lining process to replace the sanitary sewer mains. The public is advised to use caution when traveling through these areas and be aware of all traffic control. Work will be continuing for the next five weeks on the following streets:

Allouez Road, Front Street, Pioneer Road, Elder Drive, Fairway Avenue, Jonathan Carver Road, Radisson Drive, Saint Lussion Drive, Kimber Avenue, Union Street, and West Avenue.

The City of Marquette asks you for your patience during this construction process.
